1. Applicant's election of the method claims of group I and species no. 2, figure 10 in the reply filed on 12/29/2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
2. Claims 5, 8, 10 and 12-37 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 12/29/2005.
3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-4, 6, 7, 9 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Maruyama 2002/0025260. As also noted in the British Patent Office search report dated 3/3/2004 and scanned as NPL dated 3/16/2004, figure 1 of Maruyama discloses a method for discharging fluid that includes two relatively moving members 3 and 4, that control a gap X sub p for discharging dots of fluid based upon the fluid pressure and flow rate as claimed.
5. Claims 1-4, 6, 7, 9 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Maruyama 2001/0043864. Figures 12 and 13 of Maruyama disclose a method for discharging fluid that includes two relatively moving members 751, 756, 950,

951, that control a gap at 760, 761 for discharging dots of fluid based upon the fluid pressure and flow rate as claimed.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references cited on the PTO-892 teach other related rotary and piston pumps.
